Device Network Route Completed

Set Wi-Fi password

- Select **PPPoE** if your ISP has provided broadband account and password. For connecting the Wi-Fi
- Static IP is not recommended unless your ISP has provided an IP address Set Admin password and other information.

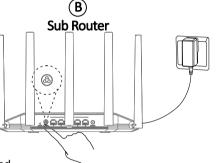

NOTE: Please check more information about VLAN and VPN on the User Manual.

- -- For managing the device

① Please refer to the *More Information* and get methods for devices that do not support Mesh Extend Wi-Fi Range by Mesh

[Before You Start]

- Ensure that both routers support Mesh.
- Ensure that A can access the Internet normally.
- Ensure that **B** is unactivated (long press the RESET button for 8s to restore if it has been activated).

[Steps]

1. Power on **B** and place it near **A**. The indicator on **B** is solid red.

Quick activate the sub router and expand

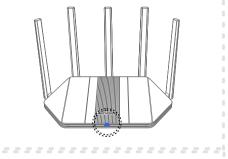

Wi-Fi coverage of the main router.

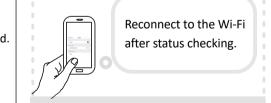

- 2. Press the @ buttons on both A and B for 1-3 seconds. Wait until the indicator on B is solid blue.
- 3. Disconnect the power supply on B, and place it in the location where Wi-Fi coverage needs to be expanded.
- 4. Reconnect **B** to the power supply. Wait until the indicator on **B** is solid blue again.

[Note]

- The Wi-Fi names and passwords of A and B are the same.
- If step 2 is failed, try to connect a LAN port of A and the WAN port of B by an Ethernet cable, and repeat the next steps after the indicator on **B** is solid blue.

The Indicator is Solid BLUF

Enjoy fast and smooth surfing!
